Career Objective

Looking for an opportunity that allows me to apply my practical experience in Data Analysis, Data Preprocessing, ETL workflow, SQL, Python, Java, RPA, Artificial Intelligence, and Database Management System to contribute to a dynamic team, foster personal growth, handle challenging issues and work towards achieving successful data-driven decision-making organizational goals.

Educational Background

BSc (Hons) Computing with Artificial Intelligence

2022 - 2025

Islington College
London Metropolitan University
Kamal Marg, Kamalpokhari, Kathmandu

SLC

Kathmandu Model Secondary School
National Examination Board (NEB), Science, Physics
Lalitpur

2020 - 2022

Work Experience

Danson Solutions Pvt. Ltd.

Oct 2024 – Feb 2025

Artificial Intelligence Intern

- Develop and designed AI powered Content generation and summarization solutions using large language model and prompt engineering techniques.
- Leverage gspread, Google API and python scripts to automate the google sheet and drive related task.
- Perform web scraping by utilizing the tools like beautiful soup and selenium to collect the structured data from the website as per the requirement.
- Requirement gathering along with exploratory data analysis and statistical analysis to create insightful visualization to assist in business decisions.

Quick Fox Consulting Pvt. Ltd.

Software Engineering Intern

Aug 2025 – Nov 2025

Associate Software Engineer

Nov 2025 – Present

- Perform invoice extraction utilizing large language model, tested its performance and enhanced the prompt to reduce the hallucination, worked on azure document intelligence SDK python, trained custom data extraction model.
- Developed and tested the panda's node for quick studio platform utilizing the technologies like python OOP, pydantic, fast API, Factory design pattern, GIT etc.
- Delivered client-specific automation solutions by developing and testing RPA (Robotic Process Automation) bots aligned with business requirements.
- Fine-tuned a computer vision-based object detection model to identify and localize handwritten signatures.
- Worked on AI-powered document processing solutions, fine-tuning Vision-Language Models (VLMs) on cheque datasets for accurate data extraction. Handled data generation and quality assurance to ensure high-quality inputs for model fine-tuning.

Skills

Technical Skills

- Programming Language: Python, Java, SQL, KQL
- Framework: Scikit learn, Flask, Java Enterprise Edition
- Libraries: Pandas, NumPy, Matplotlib, Seaborn, Beautiful Soup, PySpark, Pytorch.
- Applications and Software: Visual Studio Code, Anaconda Navigator, MS Excel, Git and GitHub (version control), Docker, Oracle, PostgreSQL, SPSS, Power BI, SSAS, SSMS, Power BI
- Other: Scrum Methodology, SDLC, Database Design, Data Analysis, Data Preprocessing, ETL workflow, Datawarehouse, OCR, RPA (Robotic Process Automation)

Soft Skills: Communication, Teamwork, Time Management, Critical Thinking

Projects:

Note: Project GitHub repo link is attached to the title of the project.

Banking OCR

- Tools and technology used: Python, Django, Tesseract engine for OCR, ultralytics (YoloV8s), OpenStreetMap, HTML CSS, JavaScript, OpenCV, MySQL workbench, Robflow(data labeling)
- It is a Django based web project which aim to simplify and streamline the process of opening the bank account through integration technology such as Document identification, User form detail automation using OCR, User location tracking, and face recognition for KYC verification.

Expensoft Web App

- The Tools and technology: Java, Java Enterprise Edition (JSP, JSTL, Servlet), SQL, HTML, CSS, MySQL Database, Apache Tomcat server
- Expensoft is an expense and income tracking web app designed and developed using java EE (Enterprise Edition) components. Implemented CRUD functionalities, Session Tracking, Role-based Authentication and Dashboard analytics for users and admins.

Road Pothole Detection

- The tools and libraries: Python, OpenCV, ultralytics, streamlit
- The Road pothole detection system developed by fine-tuning using yolo v8s object detection model on a custom pothole dataset with bounding box coordinates, and the final model was deployed in Streamlit.

Taxi Trip Data Pipeline

- Tools and technology: Microsoft SQL Server Management Studio (SSMS) for data warehouse, Microsoft SQL Server Integration Services (SSIS) for data integration, SQL Server Analysis Services (SSAS) for data analytics and Power BI for Dashboard design
- It is the Group coursework where we designed the Data warehouse schema that can efficiently store and manage the large-scale taxi trip data, developed the ETL pipeline using SSIS, performed data analytics process using SSAS Services and DAX Query to extract the hidden patterns and trends, and finally designed the Dashboard report in Power BI.

Web Scrapping job details

- The Tools and Libraries: Pandas, Beautiful Soup, requests, sleep, random
- Scraping the data from mero-job website, building the data pipeline (Extract, transform and load) and finally loaded into an Excel file. I implemented the Apache Airflow DAG for work orchestration, task scheduling, task dependencies and monitoring.

Training and Certification

- | | |
|--|---------------|
| • Microsoft Fabric Data Engineer Associates (DP-700) | 2026, April |
| • Data Engineering Professional Certificate by Snowflake | 2026, March |
| • Data Scientist Associate Certificate | 2024, August. |
